

Why Buy TEAC Tower DVD Duplicators?

There are too many duplicators out there.....

How do you really decide which one to buy and why

You should think about TEAC vs. any other name out there...

- **DVD Optical Drives: IT IS ALL ABOUT DRIVES, DRIVES, DRIVES...**
- We make our own DVD-ROM and DVD-RW optical drives for DVD tower duplicators. You do not need to worry about not being able to find a replacement drive if you have to replace any of the drives on your duplicator. Other manufacturers **DO NOT** make their own optical drives. As drives are replaced by new models every 3-6 months, this will create a problem for compatibility of all drives in the system. Choosing a TEAC duplicator will save you lots of headache in case any of the drives on your duplicator go bad...
- Since we are the only manufacturer of DVD Towers that also make the optical drives, the software / firmware for the optical drives is always **perfectly matched** to the software / firmware of the controller. This means you will not be wasting many discs to "Bad Burns" that you would certainly get on other duplicators.
- TEAC optical drives are robust. They are tested and are of TEAC Quality and Standard. We use several strict testing procedures to qualify every drive. They literally pass through many stages to be qualified and approved.
- TEAC optical drives offer better compatibility with a larger range of media. This also means higher **Quality Output**: more discs perfectly copied as opposed to less discs with inconsistent results....

Models sold separately.

"Teac duplicators use actual TEAC optical drives".
